* denotes overflow

+ denotes BTP (counted in figures for Camden & Westminster but not Newham or Hammersmith&Fulham due to infrequency of visits)

NB: Calculations based on number of stations. Most panels with 3 stations operate effectively with upwards of 17 ICVs & do not necessarily need 26

++ Minus figures denote where panels have more ICVs than required. Total current shortfall is 21.

Panels where 4 or more new members are required are highlighted in red and amber
