

Quantifiable results of the restricted duty review.

The table shows the number of officers for each defined heading from the capability/activity proforma where the officer can undertake the activity. 150 police officers in total were reviewed. Not all the fields on the capability proforma were completed by the medical officer and this will affect the results. As the activity/capability proforma continues to develop and expand it is not possible to accurately combine the results from phase 1 and 2 for those defined headings marked **.
