- The recovery in growth is likely to be slow and uneven.
- The initial reaction to the CSR is positive, but implementation risks remain.
- The path of base rates reflects the fragility of the recovery and the significantly greater fiscal tightening of the emergency budget. With growth and underlying inflation likely to remain subdued, the Bank will stick to its lower for longer stance on policy rates.
- Uncertainty surrounding Eurozone sovereign debt and the risk of contagion will remain a driver of global credit market sentiment.

<u>Underlying assumptions:</u>

- The framework and targets announced in the Comprehensive Spending Review (CSR) to reduce the budget deficit and government debt will be put to the test; meeting the 2010 borrowing target of £149bn will be crucial to the gilt market's confidence in the credibility of the deficit reduction plans.

- Despite Money Supply being weak and growth prospects remaining subdued, the MPC has gravitated towards increasing rates in the new year as global inflation continues to rise along with household inflation.
- Consumer Price Inflation is stubbornly above 3% and is likely to spike above 4% in the first quarter of 2011 as a result of VAT, Utilities and Rail Fares.
- Unemployment remains near a 16 year high, at just over 2.5 Million, and is set to increase as the Public Sector shrinks. Meanwhile employment is growing but this is mainly due to part time work, leaving many with reduced income.
- Recently announced Basel III capital/liquidity rules and extended timescales are positive for banks. Restructuring of UK banks' balance sheets is ongoing and expected to take a long time to complete. This will be a pre-condition for normalisation of credit conditions and bank lending.
- Mortgage repayment, a reduction in net consumer credit and weak consumer confidence are consistent with lower consumption and therefore the outlook for growth.
- The US Federal Reserve downgraded its outlook for US growth; the Fed is concerned enough to signal further QE through asset purchases. Industrial production and growth in the Chinese economy are showing signs of slowing. Both have implications for the global economy.
